PERSONAL EMERGENCY RESPONSE SYSTEM

THE COMFORTING CHOICE
TO HELP KEEP SENIORS

Safe At Home

The Comfort Keepers *SafetyChoice™* Personal Emergency Response System (PERS) provides seniors or other adults the security and confidence to help live independently and safely at home.

When you have a *SafetyChoice* PERS unit, help is always at hand. With the simple push of a button on a wrist band or pendant, a caring, professionally trained representative at the central monitoring station will answer the client through the two-way, tabletop PERS console and respond to the call for help. The central monitoring station will then dispatch the appropriate help and stay on the phone until help arrives — an ambulance, neighbor, family or friends.

For added safety and security, the *SafetyChoice* PERS can be expanded to monitor up to 16 additional safety devices. These include motion detectors, window/door contacts and a pressure-sensitive floor mat that can provide home security or monitor people who wander, such as those with Alzheimer's or other dementia-related conditions. Smoke and carbon monoxide detectors also can be added to the PERS system.

For additional information or to order, contact your local Comfort Keepers office.

SAFETYCHOICE™ PERS SYSTEM

- The tabletop PERS unit, with built-in speaker phone, offers hands-free, two-way voice communication
- Emergency call button is always within reach on the lightweight, waterproof pendant and can be worn on the wrist or around the neck at all times, even in the shower
- Alerts help in the critical first moments of an emergency
- System operates up to 24-hours with a rechargeable backup battery in case of a power outage
- Friendly, professional representatives are on duty at the central monitoring station 24 hours a day, seven days a week; they stay on the line until help arrives
- Visual and audible alarms make PERS ideal for hearing and visually impaired subscribers
